A dark, moody photograph of a modern living room. In the foreground, a large, light-colored sectional sofa is partially visible. Behind it, a large window is covered with dark, heavy curtains. The room has a wooden floor with a herringbone pattern and a large, light-colored rug. The overall lighting is dim, creating a sophisticated and contemporary atmosphere.

HOW TO GUIDE **MEASURING YOUR CURTAINS**

Get a greater understanding of what measurements are required and how to take them.

HERE'S WHAT YOU'LL NEED

- ✓ Tape measure or Laser Measuring Device
- ✓ Notepad & pen/pencil
- ✓ Ladder (if required for larger windows)

STEP 1

CURTAIN TRACK LOCATION

CHOOSE YOUR CURTAIN TRACK MOUNTING POSITION

TOP FIX

Mounting brackets direct to the ceiling.

FACE FIX

Mounting brackets direct to the wall.

Common Options:

- 150 mm above the window's top architrave.

Please consider when choosing face fix that the positioning above the window, is consistent with other windows that may be located in the same space.

TOP FIX
FACE FIX

STEP 2

CURTAIN SPAN

CHOOSE YOUR WINDOW COVERAGE

150mm either side of window's architrave or wall to wall finish.

Please consider when measuring, that your curtains when open, will approximately stack back 20-25% of the total width. If curtains require to stack back off the windows, allow for the additional in the overall measurement.

STEP 3

MEASURING

TOP FIX

- Measure from ceiling to finished floor.
- Measure width from left to right, based on the window coverage.

FACE FIX

- Measure drop from curtain track mounting position height to finished floor.
- Measure width from left to right, based on the window coverage.

Please consider when measuring the drop, that the measurement provided includes the desired curtain finish on the floor.

Common options:

- 10mm above finished floor (deducted 10mm from drop measurement).
- Kissing (just touching finished floor – no deductions required from drop measurement).
- Puddling (10-20mm on the floor, ideal for 100% linen curtains, add additional length to drop measurement).

***Please note that the measurements should be taken in three (3) different points; left side, middle & right side

OPERATION & BENDING GUIDE

MAC TRACKS

GENERAL TRACK INFORMATION

MAC curtain tracks have been priced at a per meter price for convenience of quoting efficiently. Each track will include, extrusion, runner/ glide type, end caps, flick stick carrier and where specified the curtain tape, curtain hooks or pendants will be supplied directly to the specified curtain workroom.

OPERATION

All tracks are priced as manual operation only, and the operational requirement will be at an additional cost; refer to the Operation Guide for operation options.

FLICK STICKS

Control quantity will be based on the opening or the quantity of curtains operating on one length of track; refer to flick stick grid for quantity suited to curtain opening.

FORM & FUNCTION

OPERATION GUIDE

All tracks in the Made to Measure pricing are manual hand traverse only, with brackets and end caps included. For the operational requirement, the additional cost will need to be considered when quoting and ordering.

When determining the opening of your curtains per curtain track, ensure the quantity requirement is allowed for. Please refer to the Flick Stick Guide below.

FLICK STICK RANGE

(For all other curtain quantity splits, please advise opening on order form for correct flick stick requirement)

THE DETAILS

CORD ACCESSORIES

Tracks that are requested for cord drawn operation, will be charged \$30 +GST per track whether it be one way draw or centre opening. MAC will provide a standard cord length of 1.8M unless (specified otherwise); and a clear cord anchor cleat for child safety requirements.

For cord accessories available, please refer to the below.

ACCESSORIES	
COLOUR	DESCRIPTION
CLEAR	MAC PULLEY
ZINC	MAC PULLEY
ZINC	MAC INSERT WHEEL PULLEY
WHITE	MAC CORD STANDARD
BLACK	MAC CORD STANDARD
WHITE	MAC CORD BLOCK NYLON
BLACK	MAC CORD BLOCK NYLON
WHITE	MAC WARNING TAG
CLEAR	MAC CORD ANCHOR CLEAT 80MM
CLEAR	MAC CORD ANCHOR P CLIP
WHITE	MAC CORD TENSIONING PULLEY

ADDITIONS & **SPECIAL REQUIREMENTS**

Orders will be manufactured to suit the length and width of the opening as a finished size. All measurements are required to be submitted in millimetres.

ANGLE BEND TRACKS

Orders submitted are required to state the back wall measurements or finished (make) size only; deductions and allowances will be made accordingly. If the curtain will be sitting in front of another window furnishing, please advise the projection of the back wall measurement required. To ensure you are supplying correct measurement details for your order request, please see the Measuring & Template Guide.

CONTINUOUS BEND TRACK

Orders submitted are required to state the back wall measurements or finished (make) size only, submitted with a 'to scale' template to replicate. To ensure you are supplying the correct measurement details for your order request, please see the Measuring & Template Guide.

JOINS

Tracks can be supplied in a length no greater than 5.8M; depending on your area of location and accessibility, you may request the track to be split. All splits of track lengths will be supplied in equal halves if measurements of split requirements are not specified on the order form.

FIT YOUR SPACE

BENDING GUIDE

MAC offers two bending options:

- 1) Angle Bends
- 2) Continuous Bends

The below MAC Tracks are available in the bending options:

BENDING OPTIONS			
TRACK TYPE	ANGLE BEND (90 & 135)		CONTINUOUS
MAC STANDARD TRACK	✓		✓
MAC D10	x		x
MAC D15	x		x
MAC D25	✓		x
MAC D38	x		x
MAC STREAMLINE TRACK	✓		✓

Price is based on per bend \$30 +GST for Angle Bends; and a per meter rate of \$45 +GST for Continuous Bends. When submitting an order for a track bend, please ensure you are supplying a detailed diagram drawing of an Angle bend; that reflects all measurements required. All diagrams received will need to include the degrees for the bends required.

For a continuous bend, a 'to scale' template of the track shaped and length is delivered to MAC to replicate what is required for site. The MAC Team will review the template received prior to commencing an order to ensure it is acceptable to replicate.

MEASURING & TEMPLATE GUIDE

CORNER WINDOWS

Measurements should always be taken from the Back Wall, left to right in any area for track calculations. Numbered areas are where measurements are required in each example diagram.

MEASURE & TEMPLATE GUIDE

BAY WINDOWS

Measurements should always be taken from the Back Wall, left to right in any area for track calculations. Numbered areas are where measurements are required which include the Internal Room measurement displayed in the example diagrams.

A LOOK AT OUR
BRACKET & TRACK JOIN GUIDE

A LOOK AT OUR
BRACKET GUIDE

All tracks in the Made to Measure pricing are provided with a bracket spacing every 650mm as a standard.

Please see below bracket guide for the quantities supplied for track lengths ordered.

BRACKET GUIDE			
TRACK LENGTH (METRES)	BRACKET QTY (PER 650 MM)	TRACK LENGTH (METRES)	BRACKET QTY (PER 650 MM)
1M	2	6.5 M	10
1.25M	2	6.75 M	11
1.5M	3	7M	11
1.75M	3	7.25M	12
2M	4	7.5M	12
2.25M	4	7.75M	12
2.5M	4	8M	13
2.75M	5	8.25M	13
3M	5	8.5M	14
3.25M	5	8.75M	14
3.5M	6	9M	14
3.75M	6	9.25M	15
4M	7	9.5M	15
4.25M	7	9.75M	15
4.5M	7	10M	16
4.75M	8	10.25M	16
5M	8	10.5M	17
5.25M	9	10.75M	17
5.5M	9	11M	17
5.75M	9	11.25	18
6M	10	11.5	18
6.25M	10	11.75	19

If you require bracket spacing to be less than 650mm, please note on the order form, and the calculation will be made accordingly.

A LOOK AT OUR TRACK JOINERS

All track types have the availability to join with another length of track of the same range.

Depending on the track type there are options to request for a track 'Joiner'; which assists in the join and stability of two tracks meeting; the type of Joiner will either be externally or internally applied.

See the images alongside referring to the joiners available based on track type.

MAC STANDARD

INTERNAL TRACK JOINER

MAC D15

EXTERNAL TRACK JOINER

MAC D25

INTERNAL TRACK JOINER

A modern living room interior with a large window, a dark pendant light, a sofa, a coffee table, and a TV stand.

TRACK JOINS & BRACKET

POSITION GUIDE

To stabilise the track at the joining ends of the lengths, reinforce with supporting brackets.

The supporting bracket positioning is crucial where the tracks meet; these should not be any more than 100mm each side of the join. From there, it requires the technician to evenly space out the remaining brackets across the track lengths to support installation stability.

MAC STANDARD

TRACK JOINER & BRACKET POSITION

The MAC Standard track Joiner is an internal component, that holds two tracks together, by inserting within the extrusion and locking in positioning with its retention barbs. When the tracks are pushed together, the Joiner is no longer visible, and the track finishes flush.

In the below image, it is visible to see how the MAC Standard track Joiner is positioned, with its barbs pointing towards the top of the track. It is recommended, that from a 100mm distance, left and right of the join, should the positioning of brackets be placed. All other brackets are to be spread out evenly and positioned to how the installer sees fit for the length of the track.

MAC STANDARD

VIEW FROM BENEATH THE TRACK

MAC STANDARD

VIEW FROM TOP OF TRACK

MAC D15

TRACK JOINER & BRACKET POSITION

The MAC D15 track Joiner is an external component, that holds two tracks together, by gripping over the join and fixing into position with grub screws.

The images below of the MAC D15 track Joiner, is positioned over the join or where the two tracks meet; securing into positioning by tighten the screws against the tracks. It is recommended, that from a 100mm distance, left and right of the join, should the positioning of brackets be placed.

All other brackets are to be spread out evenly and positioned to how the installer sees fit for the length of the track.

MAC D15

VIEW FROM BENEATH THE TRACK

MAC D15

VIEW FROM TOP OF TRACK

MAC D25

TRACK JOINER & BRACKET POSITION

The MAC D25 track Joiner is an internal component, that fits in the groove of the track extrusions' internal moulding.

The MAC D25 internal Joiner is inserted half-width into one piece of extrusion before inserting the second piece of track. By equalling the length of the Joiner between the two tracks, allows the weight of the track to be distributed evenly. It is recommended, that from a 100mm distance, left and right of the join, should the positioning of brackets be placed. All other brackets are to be spread out evenly and positioned to how the installer sees fit for the length of the track.
